DELIVERS PROVEN SOLUTION FOR MSPs

Web-enabling Remote Applications, Operating Systems, and Connectivity Frameworks

RASS – Remote Application Sharing Service – is Performance Data’s fast, simple and affordable way for MSPs to extend Windows, UNIX, and Linux applications to the Web – without touching a single line of code. Now your customers can instantly access applications from anywhere in the world, regardless of connection, location, platform, or operating system.

RASS delivers instant access to existing Windows, UNIX and Linux applications and eliminates the need for expensive, complex software such as Citrix XenApp™ and Microsoft Windows Terminal Server.

Utilizing advanced, server-centric and thin client technology, **RASS** from Performance Data will increase your revenue and strengthen your business by lowering your TCO and maximizing your ROI. Your end-users retain 100% of their business application’s features and functions and branding.

Guaranteed.

RASS – remote access sharing solution for an integrated, Web-enabled solution is totally transparent to your users.
